Remarkable Kids Deserve Remarkable Care

Pediatric Associates, P.A., is unique in its approach to excellent medical care for children in Escambia and Santa Rosa Counties. The oldest pediatric practice in Pensacola, we have been in business for over 50 years. We are a minority owned, independent physician business and the owners meet weekly to go over patient and business issues. We have second and third generation relationships and delight in them.

Our providers' dedication to the care of children and our accessibility keeps children out of the emergency room and hospitals which helps keep health care costs down. Our ability to follow a sick child every day keeps them at home where they are not susceptible to other illnesses.

All of our physicians are board certified in pediatrics, range in age from 32 to 66, male and female, and are diverse in culture. Educated at many different medical colleges, each provider brings a unique perspective to the practice and often collaborates on the care of chronically sick or complex children. Pediatric Associates, P.A., also employs two Advanced Registered Pediatric Nurse Practitioners who bring over 45 years of experience to our practice and are particularly excellent at developmental education with parents.

We are committed to seeing a sick child at a same day appointment. Patient Advocates answer our phones. Parents speak to a staff member who is dedicated to the well being of children and can make an appropriate appointment. Front office associates, at all three locations, truly care about children and have chosen to work with them in the medical field.

We employ a registered nurse to assist our families and we do not practice medicine over the phone or the internet. We are committed to thoroughly assessing sick children and following up with their treatment on a case by case basis.

Pediatric Associates, P.A., is proud of our AHCA lab inspection results and we are constantly seeking ways to improve efficiency and accuracy of in-house laboratory tests. We implemented both an Electronic Medical Record and Electronic Prescribing in 2010.

We have a custom web site with pertinent links to sites such as the American Academy of Pediatrics for frequently asked questions and we update our web information frequently with current information. We also maintain a Facebook page for our patients as a communication tool for patient parents.
